16. RISKS FACTORS

An investment made through the PMS would involve a significant degree of risk and is suitable only for investors who fully understand and are capable of bearing the risks of such investments. The Client should carefully consider the investment objectives, investment approaches and the investment restrictions as described in this Agreement. Accordingly, the Client should carefully consider the following factors, among others, before making a decision to invest through the PMS.

Management and Operational Risk

Reliance on the Portfolio Manager

- The success of the PMS will depend to a large extent upon the ability of the Portfolio Manager to source, select, complete and realize appropriate investments and also reviewing the appropriate investment proposals. The Portfolio Manager shall have considerable latitude in its choice of Portfolio Entities and the structuring of investments. Furthermore, the team members of the Portfolio Manager may change from time to time. The Portfolio Manager relies on one or more key personnel and any change/removal of such key personnel may have material adverse effect on the returns of the Client.
- The investment decisions made by the Portfolio Manager may not always be profitable.
- Investments made by the Portfolio Manager are subject to risks arising from the investment objectives, investment approach and asset allocation.

Termination Fee: Client may have to pay a high Termination Fee to withdraw the funds/Portfolio (as stipulated in the Agreement with the Client). In addition, they may be restricted / prohibited from transferring any of the interests, rights or obligations with regard to the Portfolio except as may be provided in the Agreement and in the SEBI Regulations.

Non-diversification risks: This risk arises when the Portfolio is not sufficiently diversified by investing in a wide variety of instruments, However, the Portfolio Manager will attempt to maintain a diversified portfolio in order to minimize this risk.

No Guarantee: Investments in Securities are subject to market risks and Portfolio Manager does not in any manner whatsoever assure or guarantee that the objectives will be achieved. Further, the value of the Portfolio may increase or decrease depending upon various market forces and factors affecting the capital markets such as de-listing of Securities, market closure, relatively small number of scrips accounting for large proportion of trading volume. Consequently, the Portfolio Manager provides no assurance of any guaranteed returns on the Portfolio.

India-related Risks Political, economic and social risks: Political instability or changes in the government could adversely affect economic conditions in India generally and the Portfolio Manager's business in particular. The Portfolio Entity's business may be affected by interest rates, changes in government policy, taxation, social and civil unrest and other political, economic or other developments in or affecting India.

Since 1991, successive governments have pursued policies of economic liberalization and financial sector reforms. Nevertheless, the government has traditionally exercised and continues to exercise a significant influence over many aspects of the economy. Moreover, there can be no assurance that such policies will be continued and a change in the government's economic liberalization and deregulation policies in the future could affect business and economic conditions in India and could also adversely affect the Portfolio Manager's financial condition and operations. Future actions of the Indian central government or the respective Indian state governments could have a significant effect on the Indian economy, which could adversely affect private sector companies, market conditions, prices and yields of the Portfolio Entity/ies.

Inflation and rapid fluctuations in inflation rates have had, and may have, negative effects on the economies and securities markets of the Indian economy. International crude oil prices and interest rates will have an important influence on whether economic growth targets in India will be met. Any sharp increases in interest rates and commodity prices, such as crude oil prices, could reactivate inflationary pressures on the local economy and negatively affect the medium-term economic outlook of India.

Legal and Tax risks

Tax risks: Changes in state and central taxes and other levies in India may have an adverse effect on the cost of operating activities of the Portfolio

Entities. The government of India, state governments and other local authorities in India impose various taxes, duties and other levies that could affect the performance of the Portfolio Entities. An increase in these taxes, duties or levies, or the imposition of new taxes, duties or levies in the future may have a material adverse effect on the Client Portfolio's profitability. Furthermore, the tax laws in relation to the Client Portfolio are subject to change, and tax liabilities could be incurred by Client as a result of such changes.

Bankruptcy of Portfolio Entity: Various laws enacted for the protection of creditors may operate to the detriment of the PMS if it is a creditor of a Portfolio Entity that experience financial difficulty. For example, if a Portfolio Entity becomes insolvent or files for bankruptcy protection, there is a risk that a court may subordinate the Portfolio Investment to other creditors. If the PMS/Client holds equity securities in any Portfolio Entity that becomes insolvent or bankrupt, the risk of subordination of the PMS's/Client's claim increases.

Change in Regulation: Any change in the SEBI Regulation and/or other Applicable Laws or any new direction of SEBI may adversely impact the operation of the PMS.

- Securities investments are subject to market risk and there is no assurance or guarantee that the objectives of the PMS will be achieved.
- Any act, omission or commission of the Portfolio Manager under the Agreement would be solely at the risk of the Client and the Portfolio Manager will not be liable for any act, omission or commission or failure to act save and except in cases of gross negligence, wilful default and/or fraud of the Portfolio Manager.
- The Client Portfolio may be affected by settlement periods and transfer procedures.
- The PMS is subject to risk arising out of non-diversification as the Portfolio Manager under its PMS may invest in a particular sector, industry, few single portfolio entity/ies. The performance of the Client Portfolio would depend on the performance of such companies/industries/sectors of the economy.
- Investment in Securities, whether on the basis of fundamental or technical analysis or otherwise, is subject to market risks which include price fluctuations, impact cost, basis risk etc.
- The Portfolio Manager does not assure that the objectives of any of the Investment Approach will be achieved and investors are not being offered any guaranteed returns. The investments may not be suitable to all the investors.
- Past performance of the Portfolio Manager does not indicate the future performance of the same or any other Investment Approach in future or any other future Investment Approach of the Portfolio Manager.
- The names of the Investment Approach do not in any manner indicate their prospects or returns.
- Appreciation in any of the Investment Approach can be restricted in the event of a high asset allocation to cash, when stock appreciates. The performance of any Investment Approach may also be affected due to any other asset allocation factors.
- When investments are restricted to a particular or few sector(s) under any Investment Approach; there arises a risk called non-diversification or concentration risk. If the sector(s), for any reason, fails to perform, the Portfolio value will be adversely affected.
- Each Portfolio will be exposed to various risks depending on the investment objective, Investment Approach and the asset allocation. The investment objective, Investment Approach and the asset allocation may differ from Client to Client. However, generally, highly concentrated Portfolios with lesser number of stocks will be more volatile than a Portfolio with a larger number of stocks.
- The values of the Portfolio may be affected by changes in the general market conditions and factors and forces affecting the capital markets, in particular, level of interest rates, various market related factors, trading volumes, settlement periods, transfer procedures, currency exchange rates, foreign investments, changes in government policies, taxation, political, economic and other developments, closure of stock exchanges, etc.

- Certain Relevant Parties may also serve as employees or partner(s) /director(s) of the company within the group. In such situations, the employee or partner is considered to be in a "dual hat" situation, which may result in conflicts of interest due to duties to differing entities.
- Considering Abakkus Asset Manager Private Limited (Formerly known as Abakkus Asset Manager LLP) is acting as Portfolio Manager, Investment Manager and also providing advisory services, a potential conflict of interest could be perceived between the investments and disinvestments undertaken by the Investment Manager for the schemes of AIF and various investment strategies under the PMS and investments and disinvestments advise provided to investment advisory clients.

The Portfolio Manager serves different clients under PMS, AIF, and IA mandates, who may have varying investment objectives, risk profiles, and investment horizons. At times, the investment actions/views undertaken under the PMS/AIF/IA (buy/sell/hold) in certain securities/sectors may be contrary to

the views expressed in research reports issued in the Research Analyst capacity to comply with the investment objectives of different clients. Such situations may give rise to perceived or actual conflicts of interest. The Portfolio Manager shall comply with Applicable Laws and SEBI Regulations to safeguard client interests.

- The Client Portfolio may comprise of investment in listed fixed income securities, listed debt securities/products and in case of such securities, the Portfolio Manager's ability to protect the investment or seek returns, liquidity may be limited.
- In case of in-specie distribution of the Securities by the Portfolio Manager upon termination or liquidation of the Client Portfolio, the same could consist of such Securities for which there may not be a readily available public market. Further, in such cases the Portfolio Manager may not be able to transfer any of the interests, rights or obligations with respect to such Securities except as may be specifically provided in the agreement with Portfolio Entities. If an in specie distribution is received by the Client from the Portfolio Manager, the Client may have restrictions on disposal of assets so distributed and consequently may not be able to realize full value of these assets.
- The Portfolio Manager will invest in securities listed on the stock exchange. In connection with such listing, the Portfolio Manager may be required to agree not to dispose of its securities in the Portfolio Entity for such period as may be prescribed under the Applicable Law, or there may be certain investments made by the Portfolio Manager which are subject to a statutory period of non-disposal and hence Portfolio Manager may not be able to dispose of such investments prior to completion of such prescribed regulatory tenures and hence may result in illiquidity.
- The Client Portfolio may be invested in listed securities and as such may be subject to the market risk associated with the vagaries of the capital market.
- The Portfolio Manager may also invest in Portfolio Entity/ies which are investment vehicles like mutual funds/trusts. Such investments may present greater opportunities for growth but also carry a greater risk than is usually associated with investments in listed securities or in the securities of established companies, which often have a historical record of performance.

Risks associated with investments in equity and equity linked securities

- Equity and equity related securities by nature are volatile and price fluctuations occur due to macro/micro factors, trading volume, settlement, liquidity, market scams, delisting, etc. prone to price fluctuations on a daily basis due to both macro and micro factors.
- In domestic markets, there may be risks associated with trading volumes, settlement periods and transfer procedures that may restrict liquidity of investments in equity and equity related securities.
- In the event of inordinately low volumes, there may be delays with respect to unwinding the Portfolio and transferring the redemption proceeds.
- The value of the Client Portfolio, may be affected generally by factors affecting securities markets, such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the government, taxation laws or policies of any appropriate authority and other political and economic developments and closure of stock exchanges which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets. Consequently, the Portfolio valuation may fluctuate and can go up or down.
- Client may note that Portfolio Manager's investment decisions may not always be profitable, as actual market movements may be at variance with anticipated trends.

Risks associated with investments in fixed income Securities/products

Some of the common risks associated with investments in fixed income and money market securities are mentioned below. These risks include but are not restricted to:

Interest Rate Risk: As with all debt securities, changes in interest rates affects the valuation of the portfolios, as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of longer-term securities generally fluctuate more in response to interest rate changes than do shorter-term securities. Interest rate movements in the Indian debt markets can be volatile leading to the possibility of large price movements up or down in debt and money market securities and thereby to possibly large movements in the valuation of portfolios.

Liquidity or Marketability Risk: This refers to the ease at which a security can be sold at or near its true value. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is characteristic of the Indian fixed income market.

Credit Risk: Credit risk or default risk refers to the risk which may arise due to default on the part of the issuer of the fixed income security (i.e. risk that the issuer will be unable to make timely principal and interest payments on the security). Due to this risk, debentures are sold at a yield spread above those offered on treasury securities, which are sovereign obligations and generally considered to be free of credit risk. Normally, the value of a fixed income security will fluctuate depending upon the actual changes in the perceived level of credit risk as well as the actual event of default.

Reinvestment Risk: Investments in fixed income securities may carry reinvestment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate.

Rating risks: Different types of debt securities in which the Client invests, may carry different levels and types of risk. Accordingly, the risk may increase or decrease depending upon its investment pattern, for instance corporate bonds carry a higher amount of risk than Government securities. Further even among corporate bonds, bonds, which are AA rated, are comparatively riskier than bonds, which are AAA rated.

Price volatility risk: Debt securities may also be subject to price volatility due to factors such as changes in interest rates, general level of market liquidity and market perception of the creditworthiness of the issuer, among others (market risk). The market for these Securities may be less liquid than that for other higher rated or more widely followed Securities.

Investment and Liquidity Risks: Since the Portfolio may include a limited number of investments, poor performance by one or a few of the investments could severely adversely affect the total returns of the PMS.

Identification of Appropriate Investments: The success of the PMS as a whole depends on the identification and availability of suitable investment opportunities and terms. The availability and terms of investment opportunities will be subject to market conditions, prevailing regulatory conditions in India where the Portfolio Manager may invest, and other factors outside the control of the Portfolio Manager. Therefore, there can be no assurance that appropriate investments will be available to, or identified or selected by, the Portfolio Manager.

Regulatory Risks: The Portfolio Manager will operate as per the Applicable Laws, which provide for stringent investment conditions and compliance. If policy announcements or regulations are made subsequent to this offering, which require retrospective changes in the structure or operations of the Portfolio Manager, these may adversely impact on the Client Portfolio.

Risks associated with investments in derivatives

- Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the Portfolio Manager to identify such opportunities. Identification and execution of such strategies to be persuaded by the Portfolio Manager involve uncertainty and decision of the Portfolio Manager may not always be profitable. No assurance can be given that the Portfolio Manager shall be able to identify or execute such strategies.
- The risks associated with the use of derivatives are different from or possibly greater than, the risk associated with investing directly in securities and other traditional investments.
- As and when the Portfolio Manager on behalf of Clients would trade in the derivatives market there are risk factors and issues concerning the use of derivatives that investors should understand. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is a possibility that loss may be sustained by the Portfolio as a result of the failure of another party (usually referred as the "counter party") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices. Thus, derivatives are highly leveraged instruments. Even a small price movement in the underlying security could have a large impact on their value.
- The options buyer's risk is limited to the premium paid, while the risk of an options writer is unlimited. However, the gains of an options writer are limited to the premiums earned.
- The writer of a put option bears the risk of loss if the value of the underlying asset declines below the exercise price. The writer of a call option bears a risk of loss if the value of the underlying asset increases above the exercise price.
- The Portfolio Manager may invest in derivatives to hedge market risk. The parameters that the Portfolio Manager expects to follow while making transactions in derivatives are given below:
 - Quantum of exposure to derivatives: The notional value of derivatives shall not exceed 70% of the aggregate funds placed by the client.
 - Type of derivative instruments: Index Futures / Index Options
 - Objective of using above derivative instruments: To seek to reduce losses to Client Portfolio in the event of drop in NIFTY50 Index.
 - The Portfolio Manager shall obtain prior consent from the Client for making any change in the above parameters.
 - Investments in index futures face the same risk as the investments in a portfolio of shares representing an index. The extent of loss is the same as in the underlying stocks.

Risks associated with investments into securities of Associates/Related Parties

- The associates/related parties providing services will have, responsibilities for other companies, projects and clients. Accordingly, they may have conflicts of interests in allocating management time and other resources amongst the Portfolio Manager and such other projects and clients.
- Further, the Client Portfolio may be invested in listed securities of the associates/related parties and as such may be subject to the market risk associated with the vagaries of the capital market.

Accordingly, before deciding to avail the services of the Portfolio Manager hereunder, the Client confirms to have carefully studied the specific risk factors together with all the information contained in the Disclosure Document and confirms that they have sought and obtained independent investment and tax advice.

1. Abakkus Emerging Opportunities Approach (EMERGING)

(i) Investment objective

The investment objective of the Abakkus Emerging Opportunities Approach would be to generate alpha and risk adjusted returns for client by investing in benchmark agnostic multicap portfolio with a mid and small cap bias towards companies which generally classified as mid and small size companies.

(ii) Description of types of securities e.g. equity or debt, listed or unlisted, convertible instruments, etc.

Under this approach, Portfolio would be primarily invested in listed equities and opportunistically also in money market instruments, units of mutual funds, ETFs or other permissible securities/products in accordance with the Applicable Laws.

(iii) Basis of selection of such types of securities as part of the investment approach

The Portfolio Manager seeks to generate returns for the Client through price appreciation of the stocks held over a period of time. The approach aims to adopt a strategy of stringent stock selection process and a disciplined bottom-up investing approach with a medium to long-term focus. Holdings and the sectors will be tracked on a constant basis and rebalancing wherever necessary based on revised prospects and valuations will be undertaken. Approach will be to generate returns, over the medium to long term investing predominantly in basket of listed equities across market capitalisation with bias towards companies which will classify in the mid and small market capitalisation and opportunistically also investing in money market instruments, units of mutual funds or other permissible securities/products in accordance with the Applicable Laws.

(iv) Allocation of portfolio across types of securities

The Portfolio shall be focused through a collection of core holdings and shall seek diversification cross the various sectors of the equity market. Securities shall be chosen amongst a wide spectrum of market capitalizations, from SME to large capitalization equities. However, from time to time on opportunistically basis, may also choose to invest in money market instruments, units of mutual funds, ETFs or other permissible securities/products in accordance with the Regulations. The Portfolio Manager may also, from time to time, engage in hedging strategies by investing in derivatives and permissible securities/instruments as per Applicable Laws.

(v) Appropriate benchmark to compare performance and basis for choice of benchmark

The Portfolio Manager endeavours to invest in a multicap portfolio including broader markets which are categorized as small and medium market capitalization companies. Effective April 1, 2023 SEBI has prescribed the Portfolio Managers to choose benchmarks from Nifty 50 TRI, BSE 500 TRI and MSEI SX 40 TRI. Out of the options available under regulations, BSE 500 TRI was considered to be most appropriate.

(ii) Description of types of securities e.g. equity or debt, listed or unlisted, convertible instruments, etc.

Under this approach, Portfolio would be primarily invested in Liquid Mutual Funds, short-term debt funds, money market mutual funds, and other debt funds in accordance with the Applicable Laws.

(iii) Basis of selection of such types of securities as part of the investment approach

The Portfolio Manager seeks to generate returns for the Client through optimal returns consistent with moderate levels of risk and liquidity by investing in debt securities and money market securities.

(iv) Allocation of portfolio across types of securities

The Portfolio shall invest in Debt Instruments including Government Securities, Corporate Debt, Other debt instruments, Term Deposits and Money Market Instruments with portfolio duration between 3 months and 6 months permissible securities/instruments as per Applicable Laws.

(v) Appropriate benchmark to compare performance and basis for choice of benchmark

The portfolio will consist of units of money market and liquid funds. Effective April 1, 2023 SEBI has prescribed the Portfolio Managers to choose benchmarks from Nifty Medium to Long Duration Debt Index, CRISIL Credit Index, CRISIL Composite Bond Fund Index. Out of the options available under regulations, CRISIL Composite Bond Fund Index was considered to be most appropriate.

(vi) Indicative tenure or investment horizon

Typically, investments with a medium to long term time horizon of 3-5* years.

*The Portfolio Manager may, at its discretion if it deems fit, hold any Portfolio Investment beyond 5 years, but the same shall not be beyond the Term of the Agreement.

(vii) Risks associated with the investment approach

The risks associated with the investment approach are covered in Paragraph 6 of this Document. Set out below are the corresponding risk mitigation measures in relation to such risks. The risks may affect portfolio performance even though the Portfolio Manager may take measures to mitigate the same.

- **Market Risk** The performance of the investment approach will be impacted by interest rates prevailing as well as movements in interest rates. The Investor may lose money over short or long period due to fluctuation in fund investments due to factors including but not limited to economic, political developments, changes in interest rates, inflation and other monetary factors and also movement in prices of underlining investments.
- **Interest Rate Risk** Changes in interest rates will affect the performance of the investment approach. The prices of securities usually increase as interest rates decline and usually decrease as interest rates rise. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and increase or decrease in the level of interest rate. The new level of interest rate is determined by the rate at which the government raises new money and/or the price levels at which the market is already dealing in existing securities. Prices of long-term securities generally fluctuate more in response to interest rate changes than short-term securities. The price risk is low in the case of the floating rate or inflation-linked bonds. The price risk does not exist if the investment is made under a repo agreement. Debt markets, especially in developing markets like India, can be volatile leading to the possibility of price movements up or down in fixed income securities and thereby to possible movements in the NAV. Modified Duration is a measure of price sensitivity, the change in the value of investment to a 1% change in the yield of the investment
- **Reinvestment Risk** Investments in fixed income securities may carry reinvestment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate.
- **Pre-payment Risk** Certain fixed income securities give an issuer the right to call back its securities before their maturity date, in periods of declining interest rates. The possibility of such prepayment may force the fund to reinvest the proceeds of such investments in securities offering lower yields, resulting in lower interest income for the fund.
- **Spread Risk** In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.
- **Credit Risk** Credit Risk means that the issuer of a security may default on interest payments or even paying back the principal amount on maturity. (i.e. the issuer may be unable to make timely principal and interest payments on the security). Even where no default occurs, the prices of security may go down because the credit rating of an issuer goes down. It must be, however, noted that where the Scheme has invested in Government securities, there is no risk to that extent.
- **Liquidity or Marketability Risk** This refers to the ease at which a security can be sold at or near its true value. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is characteristic of the Indian fixed income market. Trading Volumes, settlement periods and transfer procedures may restrict the liquidity of the investments made by the Scheme. Different segments of the Indian financial markets have different settlement periods, and such period may be extended significantly by unforeseen circumstances leading to delays in receipt of proceeds from sale of securities. As liquidity of the investments made by the Scheme could, at times, be restricted by trading volumes and settlement periods, the time taken by the Fund for redemption of units may be significant in the event of an inordinately large number of redemption requests or restructuring of the Scheme.

- **Reinvestment Risk** Investments in fixed income securities may carry reinvestment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate.
- **Pre-payment Risk** Certain fixed income securities give an issuer the right to call back its securities before their maturity date, in periods of declining interest rates. The possibility of such prepayment may force the fund to reinvest the proceeds of such investments in securities offering lower yields, resulting in lower interest income for the fund.
- **Spread Risk** In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.
- **Credit Risk** Credit Risk means that the issuer of a security may default on interest payments or even paying back the principal amount on maturity. (i.e. the issuer may be unable to make timely principal and interest payments on the security). Even where no default occurs, the prices of security may go down because the credit rating of an issuer goes down. It must be, however, noted that where the Scheme has invested in Government securities, there is no risk to that extent.
- **Liquidity or Marketability Risk** This refers to the ease at which a security can be sold at or near its true value. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is characteristic of the Indian fixed income market. Trading Volumes, settlement periods and transfer procedures may restrict the liquidity of the investments made by the Scheme. Different segments of the Indian financial markets have different settlement periods, and such period may be extended significantly by unforeseen circumstances leading to delays in receipt of proceeds from sale of securities. As liquidity of the investments made by the Scheme could, at times, be restricted by trading volumes and settlement periods, the time taken by the Fund for redemption of units may be significant in the event of an inordinately large number of redemption requests or restructuring of the Scheme.

(viii) Other salient features, if any.
